Anton Karl Ludwig Kühr worked as a student tutor in the “Mechanical Engineering - Product Engineering and Context (MPEC)” degree programme at Cologne University of Applied Sciences during the 2024/25 academic year.
In this role, he supported students in interdisciplinary engineering projects, particularly with project organisation, Scrum, learning processes, and technical questions related to robot control. He was able to explain technical concepts clearly while encouraging students to develop and evaluate their own solutions. As the programme was still in a pilot phase, Anton also contributed to its ongoing development by taking part in regular meetings with the teaching staff to discuss the overall state of the programme and identify improvements to the study structure and student support.
Anton carried out his responsibilities with a high degree of reliability, initiative, and professionalism. He communicated effectively with both students and teaching staff and was particularly valued for combining technical understanding with a supportive and approachable manner.
His contribution was a valuable addition to the programme, and I am pleased to recommend him for future academic and professional positions.

Kind regards, 10/12/26

Prof.Dr.-Ing. Stefan Benke
